This early work led to the introduction of some of the main structures of modern abstract algebra, groups, rings and fields. These structures have been intensively studied over the past two hundred years. For an interesting historical account of the origins of algebra the reader may consult the book by van der Waerden [15].

This section and the Introduction, which precedes Chapter I, will help provide answers. Modern algebra is sometimes called algebraic structures or abstract algebra, or merely, in the context of advanced mathematics, algebra. Although the name may suggest just a new way to present the algebra that precedes calculus, it is in fact much broader ...

In algebra, which is a broad division of mathematics, abstract algebra (occasionally called modern algebra) is the study of algebraic structures. Algebraic structures include groups, rings, fields, modules, vector spaces, lattices, and algebras. The term abstract algebra was coined in the early 20th century to distinguish this area of study from the other parts of algebra.
