The crankshaft position sensor is specifically responsible for determining the optimal position and speed of the crankshaft so that the car's computer can refine its functionality. Signs that the Crankshaft Sensor is Failing

*Signs That The Crankshaft Sensor Is Not Working in Your BMW*

The crankshaft position sensor is used to synchronize engine timing for fuel and ignition control. It is located near the starter motor, mounted in the engine block. The sensors read a toothed reluctor wheel mounted to the end of the crankshaft. It then sends a signal to the DME used to identify cylinder location.

*HOW TO TEST BMW CAMSHAFT POSITION SENSOR E46 E90 E60 E83 ...*

The crankshaft position sensor is located near the starter motor, mounted in the engine block. The sensors read a toothed-reluctor wheel mounted to the end of the crankshaft. It then sends a signal to the DME, which is used to identify cylinder location.

*BMW E46 Crankshaft Sensor Replacement | BMW 325i (2001 ...*

The crankshaft position sensor should be replaced with the same sensor used on a M52TU engine. An adaptor harness must also be installed so that it has a 12V operating voltage instead of the 5 volts currently supplied by the DME. Quality Monitoring M44/M62 Camshaft Sensor

*BMW sensor faults and problems - United Kingdom | BBA Reman*

The crankshaft position sensor is used in conjunction with the camshaft position sensor to control ignition timing and to let the computer know when to inject fuel and provide spark sequence. Due to the mounting locations of this sensor, it is common for heat and oil leaks to cause this sensor to fail.

## *BMW Car Transmission & Drivetrain Sensors for sale | eBay*

The crank sensor is located at the rear of the engine, on the lower left hand side, just below the starter motor. On the E60 chassis, with the N54 engine, we can access the sensor with relatively minimal disassembly. It's a tight fit, but the sensor is accessible while working from underneath the hood.
