Data Analysis Expressions (DAX) in Power Pivot - Excel

Power Pivot provides Data Analysis Expressions (DAX) for creating custom calculations in Power Pivot tables and in Excel PivotTables. DAX includes some of the functions that are used in Excel formulas, and additional functions that are designed to work with relational data and perform dynamic aggregation. Here are some basic formulas that could be used in a calculated column:

Calculations in Power Pivot

– Excel

Build your DAX expression on the PowerPivot Formula bar more or less as you build an Excel formula in a cell of one of its worksheets. To use a DAX function in the expression, click the Insert Function button on the PowerPivot Formula bar and select the function to use in the Insert Function dialog box (which is very similar to the standard Excel Insert Function dialog box except that it contains only DAX functions).

How to Use DAX in Excel's PowerPivot Add-In – dummies

A measure is a formula for

the values area of Power
Pivot table. A measure can
be implicit or explicit.

Implicit measures are
created automatically when
you drag and drop a field in
to Power Pivot values area.
For example, in last week's
introduction, we created an
implicit measure for SUM of
Sales by dragging and
dropping the sales amount
field in to values area of
our power pivot table ...
