Family-based therapy is a big buzzword when it comes to the treatment of adolescent eating disorders. Researchers and eating disorder professionals tout these benefits as being a key to long-term recovery to adolescents. In these family-based treatments, “the overarching aim is to empower the young person’s parents to manage and take charge of the difficult situation caused by the eating disorder [1].”

## **What Do Adolescents Consider Important in Eating Disorder ...**

Individuals with, or in recovery from, eating disorders (EDs) are likely to be negatively impacted by the COVID-19 pandemic. ED symptoms may be exacerbated by media exposure, disruption to daily activities, social isolation, modified physical activity and sleep, and negative affect and fear of contagion [ 1 ].
