Many mobile phones combine A-GPS and other location services, including Wi-Fi positioning system and cell-site multilateration and sometimes a hybrid positioning system. High-Sensitivity GPS is an allied technology that addresses some of these issues in a way that does not require additional infrastructure.

## **Assisted GPS - Wikipedia**

Assisted GPS (AGPS) and Wi-Fi can be used to precisely calculate the location of a person, but AGPS consumes a lot of power and Wi-Fi coverage is often spotty. On the other hand, Cell ID offers ubiquitous coverage in most inhabited environments, low power consumption, but has the disadvantage of lower accuracy.

## **Mobility tracking using GPS, Wi-Fi and Cell ID - CORE**

Wi-Fi positioning system is a geolocation system that uses the characteristics of nearby Wi-Fi hotspots and other wireless access points to discover where a device is located. It is used where satellite navigation such as GPS is inadequate due to various causes including multipath and signal blockage indoors, or where acquiring a satellite fix would take too long. Such systems include assisted GPS, urban positioning services through hotspot databases, and indoor positioning systems. Wi-Fi positi

At the moment, the Fused Location Provider uses GPS (when it's available), cell-tower signal strength and Wi-Fi RSSI, and fuses all this with the onboard sensors: inertial navigation from the accelerometer, gyro and compass.

## **How to achieve 1-meter accuracy in Android : GPS World**

Wi-Fi and/or cellular towers can improve GPS location in mobile devices. By improving, I mean it can accelerate acquisition of satellite data so that you can get an accurate location faster if you are in an area that doesn't happen to have clear access to the open sky. If your modem has built in GPS, it can try to get it's location on its own.

Some GPS phones use wireless-assisted GPS to determine the user's location. In wireless-assisted systems, the phone uses the orbiting GPS satellites in conjunction with information about the cell phone's signal. Sometimes called enhanced GPS, wireless-assisted GPS can often get a fix on the user's location faster than a GPS-only receiver.
